🍌 *Banana Split* 🍸

Cocktail Recipe & Mixology Platform

Project Overview & Topic

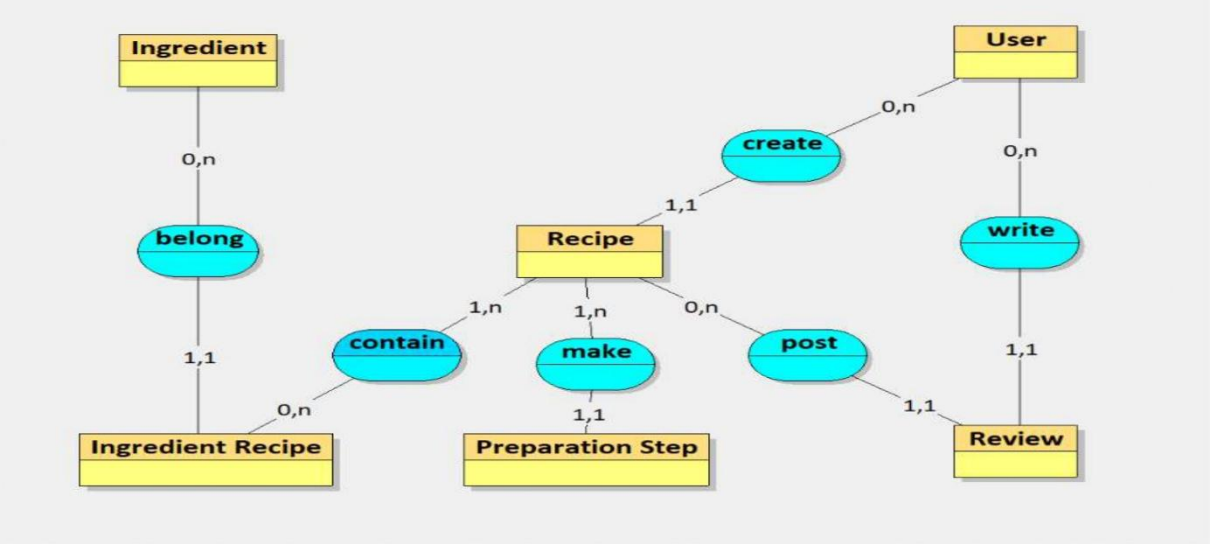

Banana Split is an interactive web application designed for cocktail enthusiasts or home bartenders.

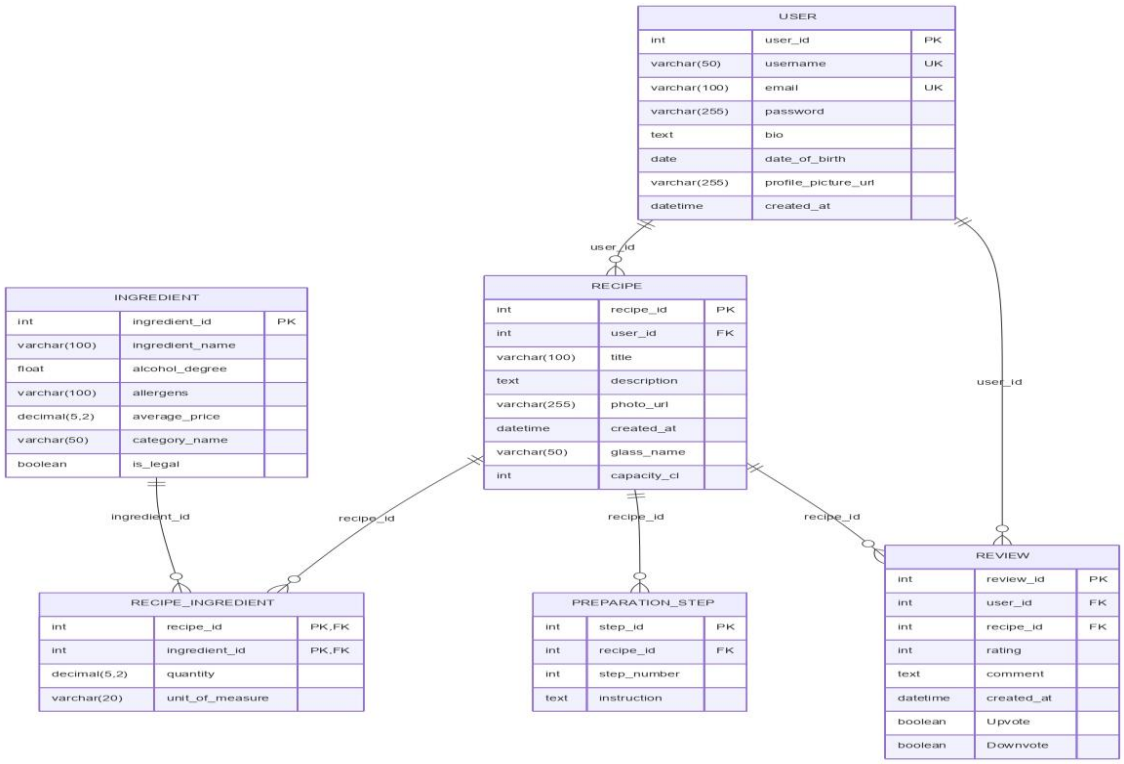

Have you ever wanted to make a cocktail at home using the ingredients you already have in your kitchen, without knowing which recipe to follow? Banana Split solves this problem by allowing users to :

1. **Search & Filter cocktail recipes** by title, creator, or directly by available ingredients.
2. **Explore Detailed Preparation Guides** including exact ingredient measurements, glassware recommendations, and step-by-step instructions.
3. **Share & Rate Creations** through a community-driven platform where members can publish their own cocktail recipes, leave star ratings, write reviews, and upvote/downvote helpful comments.

Database Architecture (ER & MLD)

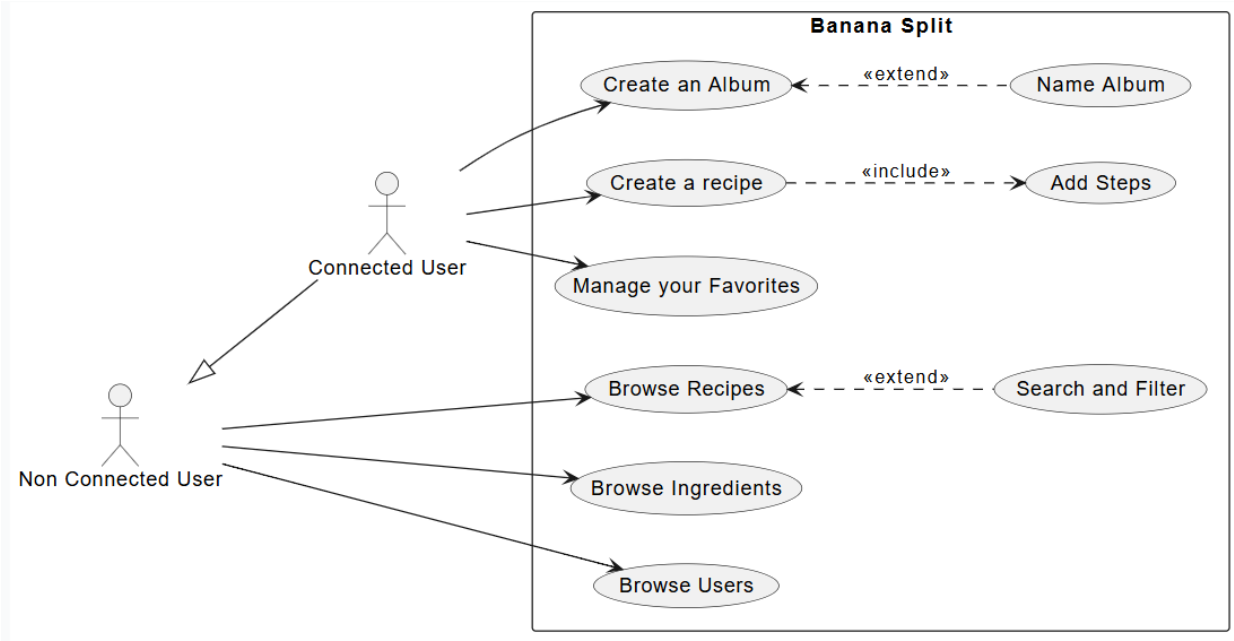

The database is normalized and structured around 6 core entities.

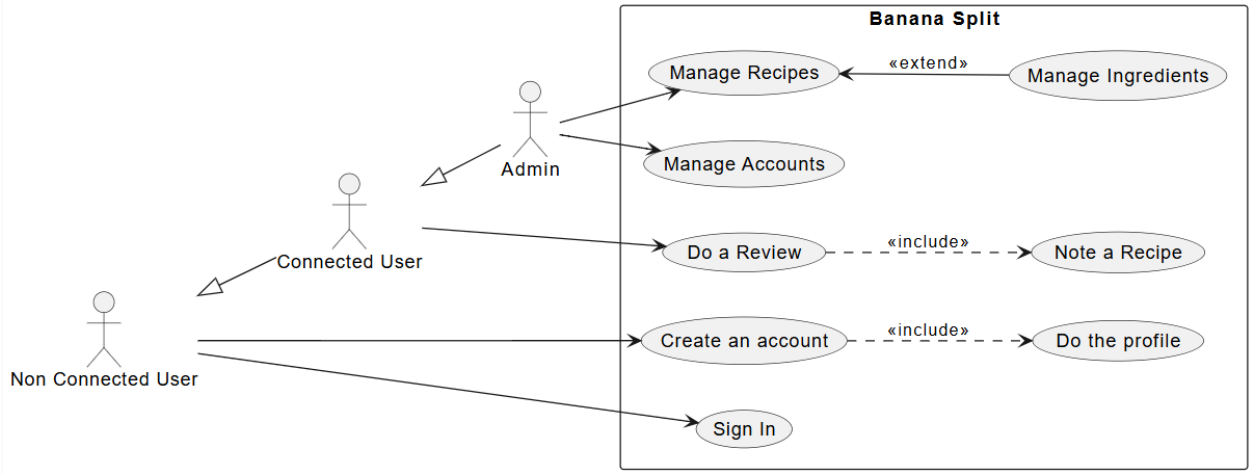

The Innovation (Use Cases)

Our application could sound like a common cocktail recipes database but It's not. Here every user can share their own recipes and try other user's recipes. The whole purpose of BananaSplit is to see **real recipes**, share content with **real users** and talk to **real people** all around the world. That's why every user has a huge way of communicating with others:

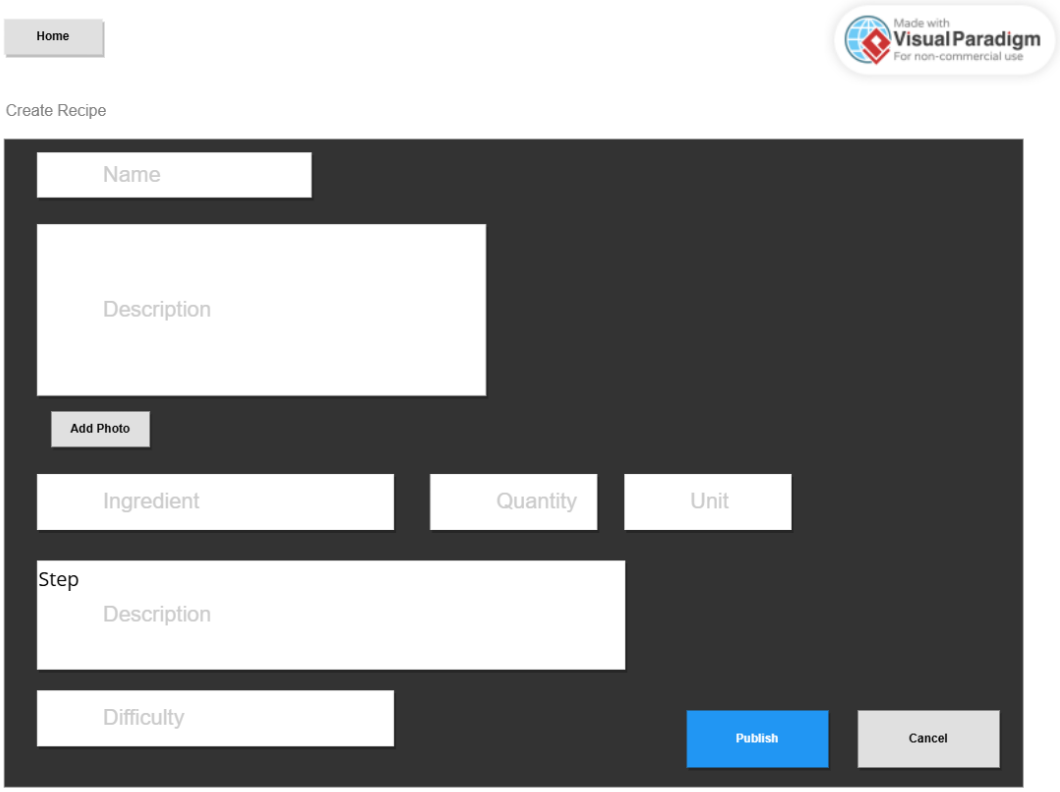

Project Roadmap & Delivrables Summary

Student Name	Main Responsibilities
Tom GARRIDO	Database modeling, Vue.js Frontend views
Antonin LE CLANCHE	SQL/JSON datasets, UML diagrams

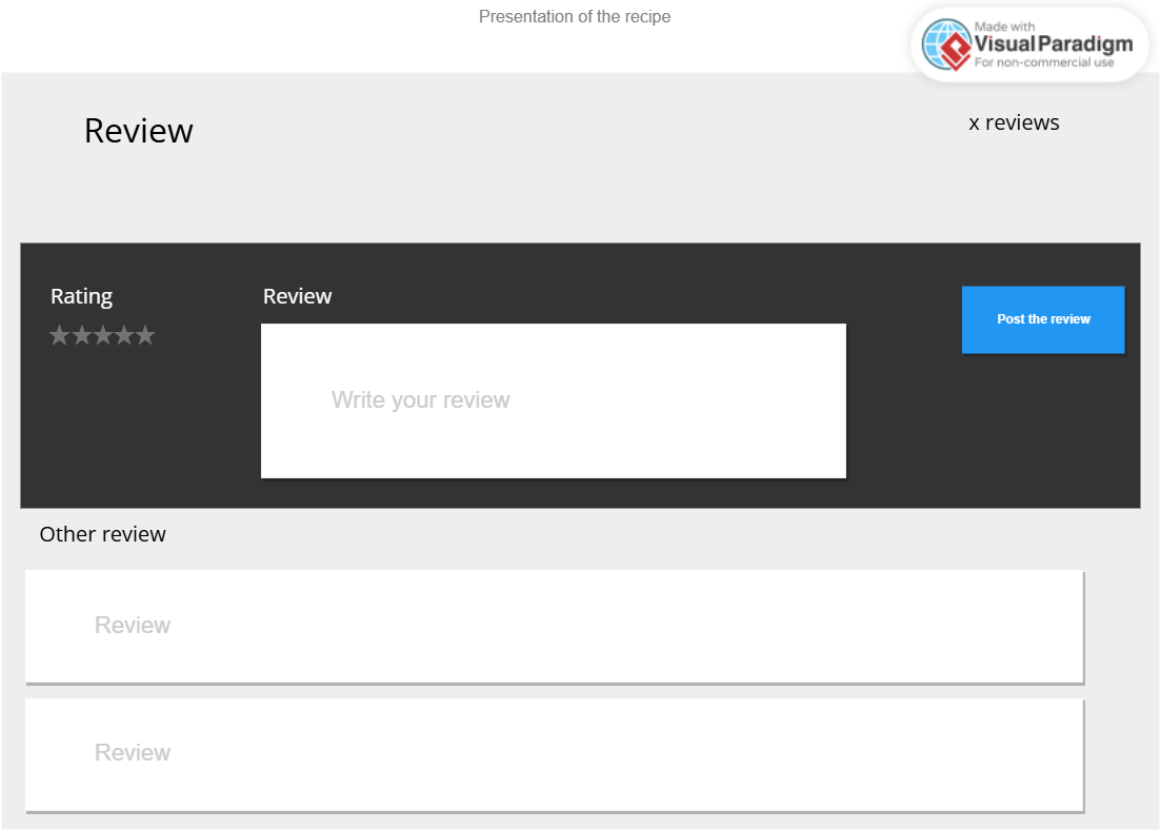

Gantt Diagram – Web Project

Step	Task	Responsible	Length (in week)	S1	S2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12	S13	S14	S15	S16	S17	S18	S19
Creating lists	Browse Recipes	Tom & Antonin	1																			
Creating lists	Browse Ingredients	Tom	1																			
Creating lists	Browse Users	Tom	1																			
Creating lists	Search and Filter	Antonin	2																			
Action on the lists	Create a Recipe	Tom	2																			
Action on the lists	Modify your Recipe	Antonin	1																			
Action on the lists	Do a Review	Antonin	2																			
Action on the lists	Add a Note	Tom	1																			
Action on the lists	Manage the Favorites	Antonin	3																			
Action on the lists	Create an Album	Tom	2																			
Action on the lists	Personnalize the Album	Tom	2																			
Implementation of User	Create an account	Tom	3																			
Implementation of User	Do the Profile	Antonin	2																			
Implementation of User	Sign In	Tom	2																			
Add Administration	Manage Recipes	Tom & Antonin	2																			
Add Administration	Manage Ingredients	Tom & Antonin	2																			
Add Administration	Manage Accounts	Tom & Antonin	2
